

Apple iOS Device Support

With the Facebook Connect License, the APM can also be configured to allow a customer to pull images from an iPhone.

To allow the device to work, the APM needs to have the license for Facebook Connect as well as have the "**Enable Apple iOS detection**" option setup in the **Devices Section** of the setup wizard.

Steps to setup an Apple Device

1. Make sure that the Phone does not have the screen locked. If the screen is locked then unlock the phone before connecting.
2. Connect the Phone to the APM via USB cable.
3. Once Windows identified it (normally indicated by a sound), the APM should detect the phone.

Supported Devices

- iPhone 3G
- iPhone 3GS
- iPhone 4
- iPhone 4GS
- iPad
- iPad 2
- iPod Touch (3rd & 4th generation)

Recognized Images from an Apple Device

Only photos taken on the device (in the "**Camera Roll**") are accessible.
